

Exercise Sheet 3. Scheduling (P&P)

1. [Overview](#)
2. [Task 1](#)
3. [Task 2](#)
4. [Task 3](#)

Overview

Process	Arrival Time	Service Time	Priority
A	0	7	2
B	3	3	1
C	4	2	3
D	6	5	2
E	8	2	3

For each task in this exercise:

- create a GANTT chart describing how these processes are assigned to the CPU according to the given scheduling algorithms, and
- compute the average *turnaround time* and *response time* for each of these cases.

Turnaround time is the number of timesteps it takes for a process to be complete. So that's from the time it arrives to the time it finishes running.

Response time, or **latency**, is the time it takes for the scheduler to schedule the process, after it has arrived. So the time from arrival to the first execution of the process.

Note that when a process is preempted, **it is always inserted to the back of the queue**, after any processes that might have arrived in the meantime, or even at the same time the preemption happens.

Note that a **higher number means higher priority** (i.e., NOT [niceness](#)).
